

PRESS RELEASE

Modus Operandi Named Solution Partner of the Year by Borland

MELBOURNE, Florida, August 13, 2001 – Modus Operandi, a leading business solutions innovator, announced that it has received the prestigious “2001 Solution Partner of the Year” award from Borland Software Corporation (NASDAQ NM: BURL) a leading provider of e-business platform solutions.

The award was announced on July 22nd by Borland President & CEO Dale L. Fuller at the 12th Annual Borland Developers Conference (BorCon™). Every year, Mr. Fuller takes a few moments during the opening keynote address to honor companies and individuals “whose notable achievements exemplify software development at its finest.”

Modus Operandi was selected for the award for the development of their Catalyst integration framework and WAVE (Wide Area Virtual Environment) collaboration suite, both of which were built with Borland® JBuilder™ and VisiBroker®. Catalyst helps developers link information from disparate hardware, applications, and operating systems, resulting in a composite, individualized, Web-based view of information without the need to acquire new hardware and software platforms. WAVE is a collaborative project development and management system. WAVE facilitates better information sharing and communication among all project stakeholders. WAVE allows people to collaborate on, share, report, search and analyze information stored in heterogeneous information systems. Systems comprised of different hardware configurations, platforms, and applications can be integrated over the Internet and accessed using a simple web browser.

Once systems are integrated using Catalyst, WAVE leverages this integration to enable a team of geographically separated people to collaborate rapidly and effectively on business and technical projects. WAVE is applicable to a wide variety of collaboration needs, such as business and market planning, design prototyping and evaluation, or joint development of a wide variety of intellectual work products. For example, engineers can use WAVE to quickly collaborate on and evaluate potential system designs.

WAVE provides the following features:

- q Collaborative information workspaces for efficient information sharing
- q Project issue tracking and management with reference links to effected items

- q Detailed report generation and report definition of all project information
- q Web-based project baseline management and document version control
- q One simple Web interface for accessing all project information
- q Reusable components for developing new information management, collaboration and automation capabilities

“The bottom line is that Catalyst and WAVE increase the productivity of distributed project teams, reduce the time to 1st article and lower development costs,” states Tod Hagan, product architect for Modus Operandi. “The drive of organizations to e-enable their businesses is creating greatly increased needs for effective collaboration based on the sharing of information. These needs transcend organizational and geographic boundaries,” he said.

According to Modus Operandi President & CEO Peter Dyson, “Corporate agility and speed is critical to every enterprise – government or commercial – that seeks to obtain a sustainable competitive advantage. People, and their ability to effectively work together, are key to achieving this advantage. Catalyst and WAVE represent the result of millions of dollars in investment to create a powerful suite of tools for information integration and for communication and collaboration among colleagues, business partners and customers. These tools are unique in their ability to support collaboration using all forms of computer-based knowledge, spanning documents, databases, plans, models, etc. Key to the creation of these tools is the ability to leverage best-of-breed commercially available technologies like JBuilder and VisiBroker. We are very pleased to be recognized by Borland as their Solution Partner of the Year, and look forward to working with them to realize the broader potential of our combined solutions.”

About Modus Operandi

Modus Operandi is a leading business solutions innovator. The company provides clients with sustainable competitive by improving collaboration across their extended enterprise – linking their people, processes, business partners and customers – so that their entire enterprise operates as a single, well-oiled machine. The company’s highly experienced teams and proven methods enable it to provide rapid, high quality, high ROI solutions.

Additional information on the company's expertise in providing leading-edge e-business solutions is available from Modus Operandi, Inc., 122 Fourth Avenue, Indialantic, FL 32903. Phone: (321) 984-3370. Fax: (321) 728-3957. E-mail: info@modusoperandi.com. Website: www.modusoperandi.com. The company maintains offices in Atlanta, Dallas, West Palm Beach and Melbourne, Florida.

WAVE allows people to collaborate on, share, report, search and analyze information stored in heterogeneous information systems. Systems comprised of different hardware configurations, platforms, and applications can be integrated over the Internet and accessed using a simple web browser.

Once systems are integrated using Catalyst, WAVE leverages this integration to enable a team of geographically separated people to collaborate rapidly and effectively on business and technical projects. WAVE is applicable to a wide variety of collaboration needs, such as business and market planning, design prototyping and evaluation, or joint development of a wide variety of intellectual work products. For example, engineers can use WAVE to quickly collaborate on and evaluate potential system designs.

WAVE provides the following features:

- q Collaborative information workspaces for efficient information sharing
- q Project issue tracking and management with reference links to effected items

- q Detailed report generation and report definition of all project information
- q Web-based project baseline management and document version control
- q One simple Web interface for accessing all project information
- q Reusable components for developing new information management, collaboration and automation capabilities

“The bottom line is that Catalyst and WAVE increase the productivity of distributed project teams, reduce the time to 1st article and lower development costs,” states Tod Hagan, product architect for Modus Operandi. “The drive of organizations to e-enable their businesses is creating greatly increased needs for effective collaboration based on the sharing of information. These needs transcend organizational and geographic boundaries,” he said.

According to Modus Operandi President & CEO Peter Dyson, “Corporate agility and speed is critical to every enterprise – government or commercial – that seeks to obtain a sustainable competitive advantage. People, and their ability to effectively work together, are key to achieving this advantage. Catalyst and WAVE represent the result of millions of dollars in investment to create a powerful suite of tools for information integration and for communication and collaboration among colleagues, business partners and customers. These tools are unique in their ability to support collaboration using all forms of computer-based knowledge, spanning documents, databases, plans, models, etc. Key to the creation of these tools is the ability to leverage best-of-breed commercially available technologies like JBuilder and VisiBroker. We are very pleased to be recognized by Borland as their Solution Partner of the Year, and look forward to working with them to realize the broader potential of our combined solutions.”

About Modus Operandi

Modus Operandi is a leading business solutions innovator. The company provides clients with sustainable competitive by improving collaboration across their extended enterprise – linking their people, processes, business partners and customers – so that their entire enterprise operates as a single, well-oiled machine. The company’s highly experienced teams and proven methods enable it to provide rapid, high quality, high ROI solutions.

Additional information on the company's expertise in providing leading-edge e-business solutions is available from Modus Operandi, Inc., 122 Fourth Avenue, Indialantic, FL 32903. Phone: (321) 984-3370. Fax: (321) 728-3957. E-mail: info@modusoperandi.com. Website: www.modusoperandi.com. The company maintains offices in Atlanta, Dallas, West Palm Beach and Melbourne, Florida.

PRESS RELEASE

Modus Operandi Named Solution Partner of the Year by Borland

MELBOURNE, Florida, August 13, 2001 – Modus Operandi, a leading business solutions innovator, announced that it has received the prestigious “2001 Solution Partner of the Year” award from Borland Software Corporation (NASDAQ NM: BURL) a leading provider of e-business platform solutions.

The award was announced on July 22nd by Borland President & CEO Dale L. Fuller at the 12th Annual Borland Developers Conference (BorCon™). Every year, Mr. Fuller takes a few moments during the opening keynote address to honor companies and individuals “whose notable achievements exemplify software development at its finest.”

Modus Operandi was selected for the award for the development of their Catalyst integration framework and WAVE (Wide Area Virtual Environment) collaboration suite, both of which were built with Borland® JBuilder™ and VisiBroker®. Catalyst helps developers link information from disparate hardware, applications, and operating systems, resulting in a composite, individualized, Web-based view of information without the need to acquire new hardware and software platforms. WAVE is a collaborative project development and management system. WAVE facilitates better information sharing and communication among all project stakeholders. WAVE allows people to collaborate on, share, report, search and analyze information stored in heterogeneous information systems. Systems comprised of different hardware configurations, platforms, and applications can be integrated over the Internet and accessed using a simple web browser.

Once systems are integrated using Catalyst, WAVE leverages this integration to enable a team of geographically separated people to collaborate rapidly and effectively on business and technical projects. “The bottom line is that Catalyst and WAVE increase the productivity of distributed project teams, reduce the time to 1st article and lower development costs,” states Tod Hagan, product architect for Modus Operandi. “The drive of organizations to e-enable their businesses is creating greatly increased needs for effective collaboration based on the sharing of information. These needs transcend organizational and geographic boundaries,” he said.

According to Modus Operandi President & CEO Peter Dyson, “Corporate agility and speed is critical to every enterprise – government or commercial – that seeks to obtain a sustainable competitive advantage. People, and their ability to effectively work together, are key to achieving this advantage. Catalyst and WAVE represent the result of millions of dollars in investment to create a powerful suite of tools for information integration and for communication and collaboration among colleagues, business partners and customers. These tools are unique in their ability to support collaboration using all forms of computer-based knowledge, spanning documents, databases, plans, models, etc. Key to the creation of these tools is the ability to leverage best-of-breed commercially available technologies like JBuilder and VisiBroker. We are very pleased to be recognized by Borland as their Solution Partner of the Year, and look forward to working with them to realize the broader potential of our combined solutions.”

About Modus Operandi

Modus Operandi is a leading business solutions innovator. The company provides clients with sustainable competitive by improving collaboration across their extended enterprise – linking their people, processes, business partners and customers – so that their entire enterprise operates as a single, well-oiled machine. The company’s highly experienced teams and proven methods enable it to provide rapid, high quality, high ROI solutions.

Additional information on the company's expertise in providing leading-edge e-business solutions is available from Modus Operandi, Inc., 122 Fourth Avenue, Indialantic, FL 32903. Phone: (321) 984-3370. Fax: (321) 728-3957. E-mail: info@modusoperandi.com. Website: www.modusoperandi.com. The company maintains offices in Atlanta, Dallas, West Palm Beach and Melbourne, Florida.

PRESS RELEASE

Modus Operandi Named Solution Partner of the Year by Borland

MELBOURNE, Florida, August 13, 2001 – Modus Operandi, a leading business solutions innovator, announced that it has received the prestigious “2001 Solution Partner of the Year” award from Borland Software Corporation (NASDAQ NM: BORL) a leading provider of e-business platform solutions.

The award was announced on July 22nd by Borland President & CEO Dale L. Fuller at the 12th Annual Borland Developers Conference (BorCon™). Every year, Mr. Fuller takes a few moments during the opening keynote address to honor companies and individuals “whose notable achievements exemplify software development at its finest.”

Modus Operandi was selected for the award for the development of their Catalyst integration framework and WAVE (Wide Area Virtual Environment) collaboration suite, both of which were built with Borland® JBuilder™ and VisiBroker®. Catalyst helps developers link information from disparate hardware, applications, and operating systems, resulting in a composite, individualized, Web-based view of information without the need to acquire new hardware and software platforms. WAVE is a collaborative project development and management system. WAVE facilitates better information sharing and communication among all project stakeholders. WAVE allows people to collaborate on, share, report, search and analyze information stored in heterogeneous information systems. Systems comprised of different hardware configurations, platforms, and applications can be integrated over the Internet and accessed using a simple web browser.

Once systems are integrated using Catalyst, WAVE leverages this integration to enable a team of geographically separated people to collaborate rapidly and effectively on business and technical projects. WAVE is applicable to a wide variety of collaboration needs, such as business and market planning, design prototyping and evaluation, or joint development of a wide variety of intellectual work products. For example, engineers can use WAVE to quickly collaborate on and evaluate potential system designs.

WAVE provides the following features:

- q Collaborative information workspaces for efficient information sharing
- q Project issue tracking and management with reference links to effected items

- q Detailed report generation and report definition of all project information
- q Web-based project baseline management and document version control
- q One simple Web interface for accessing all project information
- q Reusable components for developing new information management, collaboration and automation capabilities

“The bottom line is that Catalyst and WAVE increase the productivity of distributed project teams, reduce the time to 1st article and lower development costs,” states Tod Hagan, product architect for Modus Operandi. “The drive of organizations to e-enable their businesses is creating greatly increased needs for effective collaboration based on the sharing of information. These needs transcend organizational and geographic boundaries,” he said.
