## PRESS RELEASE

### **Modus Operandi Releases Wave 2.1**

#### ***Powerful Enterprise Integration Information System Enhanced***

MELBOURNE, Florida, April 25, 2005 – Modus Operandi, a leading software and information integration technology company, announces the release of Version 2.1 of its powerful Enterprise Integration Information (EII) system, **Wave**.

New features include third-party infrastructure components such as BEA System's *WebLogic* and *Liquid Data*, used for the EII engine and application server, and Borland's *Together Architect*, used for advanced data modeling.

*Wave* provides a unified view of the enterprise while overcoming issues of data location and format. Through a combination of advanced data models and enterprise information integration, *Wave* eliminates the need to develop, maintain, and manage unique interfaces for each data query. Unlike other EII solutions, *Wave* supports the complete information integration life cycle, from the creation and verification of the enterprise data model to the deployment of a reusable integration solution that rapidly adapts to changes in the user's environment.

Says Modus Operandi President and CEO, Peter B. Dyson, "Put simply, Wave 2.1 is software technology that accelerates strategic decision-making by connecting people and information. *Wave* takes information integration to the next level, speeding results, reducing life cycle costs, increasing quality, and realizing the ultimate goal – achieving and sustaining information superiority."

#### **About Modus Operandi**

Modus Operandi provides products and services to connect people and enterprise information. Since 1984, the company has been on the forefront of information integration technology advancement. Today, Modus Operandi provides EII delivery optimization technology and services to address complex information integration challenges.
